Who We Are.

Akiren Architects is a design-driven architectural studio established in 2024, founded by young and motivated architects **Aquino** and **Renton**. The firm was built on a shared belief that architecture should be livable, purposeful, and deeply connected to its users and environment.

We design spaces that balance industrial clarity with natural warmth, creating environments that feel grounded, intentional, and timeless.

What We Do.

Akiren Architects provides architectural services for projects that require both creative vision and technical clarity, including:

Residential Architecture

- Custom homes, rest houses, and private villas tailored to lifestyle and site conditions

Resort & Hospitality Design

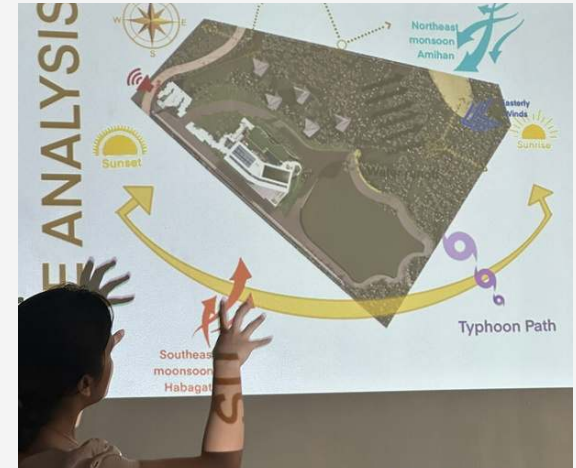

- Villas, boutique resorts, and Airbnb developments focused on experience, privacy, and long-term value

Feasibility & Pre-Design Studies

- Site evaluation, development potential analysis, and concept direction to guide informed decisions

Design and Build Services

- Integrated design and construction delivery, ensuring quality, efficiency, and accountability from concept to completion

Our Design Philosophy.

At **Akiren**, design starts with understanding.

We take time to study the site, listen to the client's goals, and identify constraints early so our solutions are not just visually compelling, but also buildable, efficient, and realistic.

Our work often reflects:

- Industrial and modern forms softened by natural materials
- Strong spatial planning and clear circulation
- Seamless indoor-outdoor relationships
- Designs that respond to terrain, views, and climate

Our Approach.

We believe that good projects come from a clear process.

Discovery & Evaluation

- Understanding the client's goals, site conditions, and development direction

Feasibility & Concept Planning

- Exploring possible approaches and identifying the most suitable solution

Design Development

- Translating ideas into detailed architectural plans and visuals

Construction & Execution

- Managing the build with close attention to quality, cost, and schedule

Ruhiges Hügel Haus, 2024 | Pantabangan, PHI

On a three-hectare hillside property, We developed a masterplan that positioned the main residence at the summit with terraced levels below for parking, a home office, and an infinity pool overlooking Pantabangan Lake. This design process emphasized site analysis, spatial organization, and maximizing views while integrating functional circulation.

Ruhiges Hügel Haus, 2024 | Pantabangan, PHI

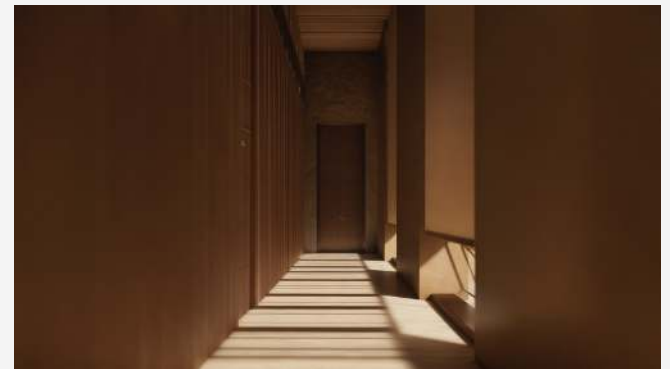

The structure was oriented with its shorter side facing prevailing winds, reducing strain from Pantabangan's strong typhoons. We specified double-glazed windows and applied reinforced design strategies, demonstrating skills in climate-responsive planning and attention to high-performance detailing.

Ruhiges Hügel Haus, 2024 | Pantabangan, PHI

We incorporated self-sustaining systems including an integrated solar farm, rainwater catchment, and agricultural spaces for the client's hobbies, an ostrich farm and Christmas tree cultivation. These elements showcase my ability to embed sustainability and lifestyle requirements into a cohesive architectural program.

Ruhiges Hügel Haus, 2024 | Pantabangan, PHI

Luxury was expressed through high-end finishes, expansive glazing, and seamless indoor-outdoor transitions. In this project, we refined my expertise in residential planning, visualization, and technical coordination translating complex client requirements into a durable, elegant architectural solution.

Casa Sandoval, 2025 | Binmaley, PHI

This residence showcases a minimal yet elegant design, defined by clean lines, balanced proportions, and refined finishes. The use of glass, wood, and neutral tones creates a contemporary aesthetic that feels both sophisticated and inviting, while the roof deck and open spaces enhance the living experience.

Casa Idio, 2023 | Osiem, PHI

Casa Idio is envisioned as a modern tropical residence where stone, wood, and glass come together to frame a seamless relationship between indoor and outdoor living. The design emphasizes openness, natural light, and ventilation, integrating ponds, gardens, and landscaped features into the everyday flow of the home. Spaces are arranged to balance privacy with connection, creating a residence that is both functional and serene.

Casa Idio, 2023 | Osiem, PHI

A key feature of Casa Idio is its sustainable rainwater system, where the butterfly roof directs rainfall into a waterfall that feeds a series of ponds at the heart of the home. Beyond function, this creates a tranquil sensory experience and reinforces the project's nature-integrated design.

Our Vision.

To shape architecture that stands the test of time spaces that feel intentional and grounded, enrich daily life, and remain respectful of both the environment and the realities of construction.

Our Mission.

To practice architecture through a clear and disciplined process designing buildable, context-driven spaces that respond to real needs, respect the land, and are responsibly carried through from design to construction.
